

# GSP XTV AXLES

## Helpful Maintenance Tips

- One the most common SXS mistake is not cleaning it after a day of riding. Dried mud can lead to numerous issues. It can get into the air intake and mask problems such as loose bolts, damaged undercarriage components.
- Caked on mud can also degrade the suspension component and lead to corrosion by moisture against the metal parts of your SXS.
- Check for any rips or tears or evidence of grease leaking from the boots, catching this early can help you from a broken axle on the trail.

## GSP XTV AXLES

### Heavy Duty (HD) Axles

#### Features & Benefits

- Manufactured with high performance Moly grease for optimal performance at high temperatures and resistance to friction in the most extreme conditions.
- GSP's premium grade neoprene & TPEE boots are designed for superior performance and durability in even the most extreme conditions.
- Heavy Duty Center Shafts use industry leading alloy material to increase strength over OE axle.
- Oversized CV joints dramatically improved strength for high articulation angles.

\*Not intended for use in lifted vehicles

### Xtreem Duty (XD) Axles

#### Features & Benefits

- 30% Stronger than OE.
- Designed with lifted vehicles in mind.
- Oversized CV joints dramatically improved strength to allow for high articulation angles for XTREEM driving styles in rough terrains.
- Maximized CV center shaft size for increased strength and durability. Quality you can see.
- Engineered with 4340 chromoly steel and finished with a proprietary heat treatment for long-lasting performance life.
